

Liquid **Weather**

PATENTED
THE ORIGINAL
AGEING
SOLUTION

BEFORE

AFTER

- Unique:** Matches and blends new and old in one easy application to give a patina that is otherwise only achieved by age and weathering.
- Effective:** LIQUID WEATHER is made from acrylic water-based resins to penetrate and stain microscopically, leaving the surface texture unchanged. Being water-based, LIQUID WEATHER is not a paint, nor will it change the surface colour, other than through a natural-looking darkening effect that can be varied as required.
- Permanent:** Once treated, the surface is highly weather and wear resistant and will not need reapplication.
- Safe:** Water soluble, without dangerous chemicals, LIQUID WEATHER can be used with peace of mind. Simple rubber gloves and protective goggles are recommended to avoid staining the skin and contact with eyes.
- Compatible:** LIQUID WEATHER does not retard fungal growth which ensures that once treated any new surface will age and weather at the same rate as surrounding surfaces.
- Flexible:** To achieve a lighter shade on first application LIQUID WEATHER can be diluted with water. A darker effect can be achieved by applying more than one coat.
- Easy to use:** LIQUID WEATHER can be applied by brush, sponge, cloth or any simple hand sprayer. Brushes and equipment are rinsed in water after use.
- Economical:** One litre of LIQUID WEATHER permanently treats up to 8 square metres of stone, brick, concrete or roof tiles.
